

Moist Food Spout

Moist Food Spout (for Omega VI grinders)

Moist product such as peanut butter comes out from between the burrs at 360 degrees, making it messy to collect and direct into a container.

The Moist Food Spout collects and delivers the product directly into consumer use containers. Without the intermediate step of repacking containers from a bulk source, the process can be made more sanitary, less labor intensive and easier to clean.

Users of OMEGA IV or V may contact CTI for availability of a similar device for those machines.
